

How to solve problem that Tax code is not available in Sales or Purchase

In version 16.2.12 or 16.2.13, you may see that you cannot find GST Tax code in sales or purchase invoice and tax table is opening again and again. This has been solved in new patch and you may download new patch.

To solve the problem immediately, you can modify particular tax code from System->GST Updates menu->tax master option. There is a tick on inactive, please remove that tick. It will allow you to use this tax code. You may have to do it again, if you face similar problem.
